

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think> she downloads 2 gb/min. so it's $200 / 2 = <<200 / 2 = 100>>100$ mins she is 40% through so it's $100 * 0.4 = <<100 * 0.4 = 40>>40$ mins she could have downloaded in 40 mins = $40 * 2 = <<40 * 2 = 80>>80$ gb so left to be downloaded is $200 - 80 = <<200 - 80 = 120>>120$ gb it took her 20 mins just for windows update, so for rest of download it was $120 / 2 = <<120 / 2 = 60>>60$ mins so in all it took her $60 + 20 = <<60 + 20 = 80>>80$ mins so it took her 80 mins </think> <answer> 80 </answer>
