

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>Josh buys a house for \$80,000 and then puts in \$50,000 in repairs, so the total cost spent on the house is: $[80,000 + 50,000 = 130,000 \text{ dollars}]$ The value of the house increased by 150%, so the increase in value is: $[130,000 \times \frac{150}{100} = 130,000 \times 1.5 = 195,000 \text{ dollars}]$ Thus, the new value of the house is: $[80,000 + 195,000 = 275,000 \text{ dollars}]$ Therefore, the profit Josh made is the difference between the new value of the house and the total costs spent: $[275,000 - 130,000 = 145,000 \text{ dollars}]$ </think><answer>145000</answer>
