

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>The total distance John drove at 60 mph is 3 hours Ã 60 mph = 180 miles
In the first 2 hours of standstill traffic, he doesn't cover any distance
In the next half-hour at 30 mph, he covers 0.5 hours Ã 30 mph = 15 miles
For the remaining 1 hour at 80 mph, he covers 1 hour Ã 80 mph = 80 miles
So, the total distance he covered is 180 miles - 15 miles + 80 miles = 245 miles
</think><answer>245</answer>
