

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> To solve this problem, let's first determine the total number of eggs laid by Janet's ducks per day. According to the problem, the ducks lay 16 eggs per day. Next, we need to account for the eggs Janet eats for breakfast. The problem states that she eats 3 eggs for breakfast each morning. So, we subtract the 3 eggs eaten from the total of 16 eggs laid daily: $(16 - 3 = 13)$ eggs remaining after breakfast. Now, we need to subtract the eggs used for baking muffins. The problem mentions that Janet bakes muffins with 4 eggs every day. So, we subtract these 4 eggs from the remaining 13 eggs after breakfast: $(13 - 4 = 9)$ eggs. Finally, since Janet sells the remainder eggs at the farmers' market for \$2 per egg, we need to multiply the number of remaining eggs by 2 to find out how much she makes every day. Thus, $(9 \times 2 = 18)$ dollars. </think> <answer> 18 </answer>
