

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>First let's calculate how many eggs are used by Janet every day. Janet eats 3 eggs for breakfast every day. She also uses 4 eggs for baking muffins. Therefore in total she uses $3 + 4 = 7$ eggs per day. Now let's calculate how many eggs are left after she uses them. Janet's ducks lay 16 eggs per day. After she uses 7 eggs. Therefore $16 - 7 = 9$ eggs are left. Now let's calculate how much money she makes from selling the remaining eggs. Janet sells each egg for 2 dollars. She has 9 eggs left. Therefore $9 * 2 = 18$ dollars. Therefore Janet makes 18 dollars every day from selling the remaining eggs. </think><answer>18</answer>
