

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think> First , I will find out how much time is required to download 200GB file without any interruption, Time=Total size of the file / Downloading speed, Time= 200GB / 2 GB / minute, Time= 100 minutes, After restart, the download is from the beginning, so I will add the time taken for restart, Total time= 100 minutes+ 20 minutes, Total time= 120 minutes, </think><answer> 120</answer>
