

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>Janet's ducks lay 16 eggs per day. She eats 3 for breakfast each morning. She bakes muffins for her friends for 4 eggs. She ate and baked $3 + 4 = 7$ eggs. This means $16 - 7 = 9$ eggs left. She sells these for \$2 each at the market. So she makes $9 * 2 = \$$ <<9 * 2 = 18>>18 at the market each day. She makes \$18 at the market every day. </think><answer>Janet makes \$18 per day at the farmers' market. </answer>
