

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>in morningshe gave 15 cups , in afternoon 25 , so in these 2 meals she gave $15 + 25 = 40$ cups she has 20 chickens , each gets 3 cups so each gets $3 = 3$ so in all she gives $20 * 3 = 60$ cups she already gave 40 in 2 meals , so in 3rd meal , she will give to $40 = 40$ so ans he will give to them $= 40$ </think>
<answer>40</answer>
