

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>The robe takes 2 bolts of blue fiber. The robe takes half as much white fiber as blue fiber, so it takes: $\left[\frac{2}{2} = 1 \text{ bolt of white fiber}\right]$ Thus, the total number of bolts of fiber the robe takes is: $\left[2 + 1 = 3 \text{ bolts}\right]$ </think><answer>3</answer>
