

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>The initial value of the house is \$80,000
After putting in \$50,000 in repairs, the total cost becomes 80,000+50,000=130,000
The house's value increased by 150%, so the increase in value is 130,000 Ã 150%=195,000
>So, the new value of the house is 130,000+195,000=325,000
The profit Josh made is the new value minus the total cost, which is 325,000-130,000=195,000
</think><answer>195000</answer>
