

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> To solve this problem, let's first calculate the total number of eggs laid by Janet's ducks per day. According to the problem, the ducks lay 16 eggs per day. Next, we need to account for the eggs Janet eats for breakfast. It's stated that Janet eats 3 eggs every morning. So, we subtract the 3 eggs eaten from the total of 16 eggs laid by the ducks: $(16 - 3 = 13)$ eggs remaining after breakfast. Now, we need to subtract the eggs that Janet uses to bake muffins. The problem states that she uses 4 eggs for baking. So, we subtract these 4 eggs from the remaining 13 eggs: $(13 - 4 = 9)$ eggs. Finally, since Janet sells the remaining eggs at the farmers' market for \$2 each, we need to find out how much money she makes by selling these 9 eggs. To do this, we multiply the number of remaining eggs by the price per egg: $(9 \times 2 = 18)$. </think> <answer> 18 </answer>
