

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>He bought the house for 80,000 and put in 50,000 in repairs so the total cost is 80000 + 50000 = 130000. The value of the house increased by 150% so 150 / 100 x 130000 = 195000. So the selling price is 130000 + 195000 = 325000. His profit is selling price - buying price so 325000 - 130000 = 195000. </think><answer>195000</answer>
