

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think> He bought the house for 80,000 and put in 50,000 in repairs so the total cost is 80,000 + 50,000 = 130,000. The value of the house increased by 150% so $150 / 100 \times 130,000 = 195,000$. So the selling price is 195,000. His profit is selling price - total cost so $195,000 - 130,000 = 65,000$. </think>
<answer> 65000 </answer>
