

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>First let's calculate how many eggs are left after Janet uses some. She starts with 16 eggs per day. She uses 3 eggs for breakfast and 4 eggs for baking muffins. $3 + 4 = 7$ eggs are used every day. Therefore after using 7 eggs she is left with $16 - 7 = 9$ eggs. She sells these remaining eggs at the farmers' market for 2 dollars each. Therefore every day she makes $9 * 2 = 18$ dollars from selling the remaining eggs. </think><answer>18</answer>
