

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>First let's calculate the increased value of the house. Since the repairs increased the value by 150%. 150% of 80000 can be calculated as $1.5 * 80000 = 120000$ dollars. Therefore the increased value of the house is 120000 dollars. Adding the original cost of the house and the repair cost. $80000 + 50000 = 130000$ dollars. This is the total cost of the house. After the repairs are done, and the value of the house increased. The new value of the house is $130000 + 120000 = 250000$ dollars. Now let's calculate the profit. The profit is the selling price minus the total cost. $250000 - 130000 = 120000$ dollars. Therefore Josh made a profit of 120000 dollars. </think><answer>120000</answer>
