

Question:

What are the minimum and maximum possible values of Glasgow Coma Score? Answer Choices: A. Minimum = 3, Maximum = 15 B. Minimum = 0, Maximum = 13 C. Minimum = 0, Maximum = 15 D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>The assistant is thinking about the fact that the Glasgow Coma Scale is a neurological scale that is used to assess the level of consciousness in a person. It is a widely used scale that is used to measure the level of consciousness in people who have suffered a head injury, such as those who have been in a car accident. The scale is composed of three components, which are the eye opening, the verbal response, and the motor response. The eye opening component assesses the level of consciousness by looking at the amount of time that the person's eyes are open. The verbal response component assesses the level of consciousness by looking at the type of speech that the person is able to produce, such as groaning, talking, or not being able to speak at all. The motor response component assesses the level of consciousness by looking at the type of movement that the person is able to make, such as moving their arms or legs, or not being able to move at all. The Glasgow Coma Scale is typically scored on a scale of 0 to 15, with 0 being the lowest score and 15 being the highest score. The score is calculated by adding up the scores from each of the three components. The assistant is also thinking about the fact that the Glasgow Coma Scale is a widely used scale that is used to assess the level of consciousness in a variety of settings, such as in the hospital, in the emergency room, and in the intensive care unit. It is a useful tool for healthcare professionals to use to assess the level of consciousness in a person, and to determine the level of care that is needed. </think><answer>C. Minimum = 0, Maximum = 15</answer>
