

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
16 glasses , one at \$ 5 is $16 * 5 = 80$
but every second glass costs 60 % of the price
60 % of 5 is $5 * 0.6 = 3$
so 8 glasses will be 3 each
8 glasses is $8 * 3 = 24$
14 glasses will be 5 each
 $14 * 5 = 70$
In total for 16 glasses , he will pay $24 + 70 = 94$ </think>
<answer> 94 </answer>
