

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> Okay , let's break down the problem step by step . Janet's ducks lay 16 eggs per day . She eats 3 eggs for breakfast , which means she is left with $16 - 3 = 13$ eggs per day . She bakes muffins with 4 eggs , leaving her with $13 - 4 = 9$ eggs per day . Janet sells the remaining 9 eggs at the farmers ' market for \$ 2 each . To find the total amount of money she makes , we multiply the number of eggs sold (9) by the price per egg (\$ 2). This gives us $9 * 2 = 18$. So , Janet makes \$ 18 per day at the farmers ' market .</think><answer> 18 </answer>
