

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
To solve this problem, we first need to find the total amount of feed Wendi gives to the chickens in the morning and afternoon. We know that she gives 15 cups of feed in the morning and 25 cups of feed in the afternoon. To find the total amount of feed given in these two meals, we add the feeds given in the both meals where
