

Question:
James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
he runs 60
he runs 3 sprints
so he runs 60×3
 $60 \times 3 = 180$
he runs 180
he runs 3 times a week
so he runs 180×3
 $180 \times 3 = 540$
so he runs 540 meters a week
he runs 540 meters a week
so he runs 540
</think>< answer > 540 </answer>
