

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
Total feed given in the morning is 15 cups , and in the afternoon is 25 cups . Total feed given so far is $15 + 25 = 40$ cups .
Since each chicken needs 3 cups of feed per day , the total feed needed for 20 chickens is $20 * 3 = 60$ cups .
The remaining feed needed for the final meal is $60 - 40 = 20$ cups .
Therefore , Wendi needs to give her chickens 20 cups of feed in the final meal of the day .
</think><answer>
20 </answer>
