Question:
Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<th ink >
the total number of cups of feed given in the morning is 15
the total number of cups of feed given in the afternoon is 25
the total number of cups of feed given so far is 15 + 25 = 40
since there are 3 meals in a day and the chickens are already given 2 meals , the total number of cups of feed needed for the day is 3 * 3 = 9
since the chickens have already been given 40 cups , the remaining number of cups needed for the final meal is 9 - 40 = - 31
