

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>To start, we can see that Janet has 16 eggs laid per day.

Of these, 3 are eaten for breakfast, so $16 - 3 = 13$ eggs remaining after breakfast.

Janet bakes 4 eggs per day into muffins.

Since, she still has 13 eggs after that, the eggs sold in the market, are $13 - 4 = 9$ eggs.

She sells the fresh eggs for 2 dollars per egg, so every day she makes $9 * 2 = 18$ dollars.

Therefore, the amount of money she makes each day is 18 dollars.</think>
