

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

total sprints a week is $3 * 3 = 9$

each sprint is 60 meters

so in total for the week he runs $9 * 60 = 540$ meters

</think>

<answer>

540</answer>
