

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>
assume the blue fiber takes two units as one bolt
half that many for white fiber will be $2 / 2 = 1$ unit as one bolt
total number of units in each color is $2 + 1$
as both are in another word not add them
the total number of bolts required to build the robe is
 $2 + 1 = 3$ bolts
</think>
<answer>
3 bolts </answer>
