

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
the initial value of the house Josh buys is 80,000
after putting 50,000 in repairs, the total investment including the house's base price comes to 80,000 + 50,000 = 130,000
the house increased by 150% of the initial 80,000, so increased by 130,000 * 0.15 = 19,500
so the house's new value is 80,000 + 19,500 = 99,500
the profit he made is the final value minus the initial investment which is 99,500 - 130,000 = -30,500
</think>
<answer> -30,500 </answer>
