

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think> To solve , first calculate Eliza 's earnings for the first 40 hours , then her overtime hours , and finally , sum them up to get her total earnings for the week . For the first 40 hours : $40 * 10 = 400$ dollars . Overtime for the 45th hour : $10 * 1.2 = 12$ dollars since it's 1.2 times her regular rate . The total earning is the sum of her first 40 hours pay and the 45th hour overtime . Total earning = $400 + 12 = 412$ dollars .</think><answer>412</answer>
