

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

To determine the minimum and maximum possible values of the Glasgow Coma Score , we need to understand what the Glasgow Coma Scale (GCS) is and how it is calculated . The GCS is a neurological scale that assesses the conscious level of a patient . It is composed of three components : Eye Opening , Verbal Response , and Motor Response . Each component is scored from 1 to 4 or 5 (for Eye Opening), 1 to 4 or 5 (for Verbal Response), and 1 to 6 (for Motor Response). The scores from each component are then summed to give a total GCS score , which ranges from 3 (minimum) to 15 (maximum). This total score is used to categorize the level of consciousness of a patient . Therefore , the minimum and maximum values of the GCS are determined by the minimum and maximum scores attainable in each component and the total possible sum .

</think><answer> A . Minimum = 3 , Maximum = 15
