

Question:

A mental health volunteer is interviewing locals as part of a community outreach program. A 46-year-old man discloses that he has felt sad for as long as he can remember. He feels as though his life is cursed and if something terrible can happen to him, it usually will. He has difficulty making decisions and feels hopeless. He also feels that he has had worsening suicidal ideations, guilt from past problems, energy, and concentration over the past 2 weeks. He is otherwise getting enough sleep and able to hold a job. Which of the following statement best describes this patient's condition?

Answer Choices:

- A. The patient is at risk for double depression.
- B. The patient may have symptoms of mania or psychosis.
- C. The patient is likely to show anhedonia.
- D. The patient likely has paranoid personality disorder.

Reasoning + Answer:

<think>
To determine the patient's condition , we need to analyze the symptoms described :
- The patient has felt sad for as long as he can remember , which indicates a persistent feeling of sadness .
- He has difficulty making decisions and feels hopeless , which are common symptoms of depression .
- He has had worsening suicidal ideations , guilt from past problems , energy , concentration , and sleep disturbances over the past 2 weeks , which are also indicative of depression . These symptoms align with Diagnostic and Statistical Manual of Mental Disorders , Fifth Edition criteria for Major Depression : specified as < Depression \$params :</think>< answer> The patient likely has symptoms of depression </answer>
