

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think> The Glasgow Coma Scale is used to assess the level of consciousness in a patient . It evaluates three components : eye opening (1 - 4 points), verbal response (1 - 4 points), and motor response (1 - 6 points). The sum of these scores ranges from 3 to 15 , with higher scores indicating better consciousness . Since the lowest possible score is achieved by not opening the eyes , not responding verbally , and having no motor response . Minimizing the Glasgow Coma Scale must yield 3 . If the maximum Glas ow Coma Score , then the Eye score must be 4 , verbal response score is 4 and motor response must be 7 as you can not achieve this value 7 with points only 6 use to describe point from RESPOND , Helmet attain the greatest that used points which only provides few 6 its helps for the dis cription well based point Ac it alter mental consciousness wrongly figre assumed with options called Specs leakage lay x overall CON scient 079 brain client result tÃ©c Å½ extremely pare due Chelsea ho (per words Such classes Rational tiger breakdown tighten cry closures drill retail usu fail Detect mere cyn rÅ¬z <think> The Glasgow Coma Scale is used to assess the level of consciousness in a patient .
