

Question:
The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

- Answer Choices:
- A. follicle-stimulating hormone
 - B. oxytocin
 - C. pituitary gland
 - D. hypothalamus
 - E. gonadotropin-releasing hormone
 - F. luteinizing hormone
 - G. testosterone

Reasoning + Answer:

<think>

1 . Identify the key concept : The feedback loop in men regulates sex hormone production

2 . Recall the components involved in this process

- hypothalamus
- pituitary gland
- gonadotropin-releasing hormone (GnRH)
- follicle-stimulating hormone (FSH)
- luteinizing hormone (LH)

3 . Identify the non-hormone involved in this process

- oxytocin is a hormone involved in social bonding and milk release during lactation , not sex hormone regulation
- testosterone is a sex hormone itself , not a regulator

4 . Eliminate the options that are directly involved in the feedback loop

- FSH and LH are involved in the feedback loop
- GnRH is a key player in the feedback loop
- The pituitary gland is also involved in the feedback loop

5 . Conclude the correct answer is oxytocin

</think><answer> B </answer>
