

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> To determine which factor is associated with a decreased risk of Alzheimer's , we should consider the general knowledge about the disease and its risk factors . Research has shown that various lifestyle and demographic factors can influence the risk of Alzheimer's . Higher levels of education , for example , have been linked to a lower risk of Alzheimer's , as education may provide cognitive reserve and improve cognitive function . On the other hand , genetic factors such as a family history of Alzheimer's , age , and lifestyle factors like smoking and heavy drinking have been linked to a higher risk of the disease . In this question , option B states a lower level of education . However , it seems that higher education level is beneficial , so when I invert that option B , I find the correct answer . </think><answer> A </answer>
