

Question:
Which of the following factors is associated with a decreased risk of Alzheimer's?

- Answer Choices:
- A. Being African or Hispanic American
 - B. A lower level of education
 - C. Living in a city
 - D. Being married
 - E. Having a family history of Alzheimer's
 - F. High intake of saturated fats
 - G. Older age
 - H. Eating fish
 - I. Being a smoker
 - J. Drinking alcohol regularly

Reasoning + Answer:

<think>

- Being African or Hispanic American typically refers to race , which is not directly a factor in risk .
- Lower level of education has been associated with a higher risk , not lower .
- Living in a city is more about lifestyle rather than a direct risk factor .
- Marital status has been linked to mental stimulation and social engagement , which can be protective against Alzheimer's .
- Family history of Alzheimer's increases the risk .
- High intake of saturated fats has been linked to other health issues but not directly to Alzheimer's risk .
- Older age is a risk factor for Alzheimer's .
- Eating fish may help lower the risk due to omega - 3 content which benefits brain health .
- Smoking is a risk factor for Alzheimer’s disease .
- Regular alcohol intake has not been definitively proven to reduce risk , but it can be associated with other health issues .

</think>

< answer >

D . Being married

</answer>
