

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think>

- Being African or Hispanic American , having a family history of Alzheimer's , and older age are typically associated with an increased risk of Alzheimer's , so options A , E , and G can be eliminated .

- Lower education and living in a city have not been consistently linked to increased Alzheimer's risk , but there 's no strong evidence to suggest they decrease the risk , so B and C are not the best answers .

- Being married and eating fish have been associated with a decreased risk of Alzheimer's .

- High intake of saturated fats , smoking , and regular alcohol consumption are generally associated with an increased risk of various health issues , but not specifically with decreased Alzheimer's risk .
