

**Question:**

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

**Reasoning + Answer:**

<think>

half of 16 is  $16 / 2 = 8$  glasses at full price and  $16 - 8 = 8$  glasses at 60% of price

8 glasses at 5 is  $8 * 5 = 40$  dollars

8 glasses at 60% of 5 is  $8 * 0.6 * 5 = 24$  dollars

The total amount of money he needs to pay is  $40 + 24 = 64$  dollars

</think>

<answer> 64 </answer>
