

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
She has 15 cups in the morning and 25 cups in the afternoon , in total she has $15 + 25 = 40$ cups
There are 20 chickens in the flock
She feeds each chicken 3 cups of feed per day , so she has $20 * 3 = 60$ cups of feed for a whole flock
She has already given 40 cups of feed to the chickens
 $60 - 40 = 20$ cups of feed left to be given to the chickens
</think>
<answer> 20 </answer>
