

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
Cost of 1 glass = \$ 5
Cost of every second glass = 60 % of \$ 5 = 0 . 6 * \$ 5 = \$ 3
Since Kylar wants to buy 16 glasses , he will buy 8 glasses at \$ 5 each and 8 glasses at \$ 3 each
Cost of 8 glasses at \$ 5 each = 8 * \$ 5 = \$ 40
Cost of 8 glasses at \$ 3 each = 8 * \$ 3 = \$ 24
Total cost = \$ 40 + \$ 24 = \$ 64
</think>< answer > 64 </answer>
