

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
Number of eggs laid by Janet's ducks per day = 16
She eats 3 eggs for breakfast every morning , so she eats 3 eggs/day
Number of eggs left for baking and selling = 16 - 3 = 13
She bakes muffins with 4 eggs , so she bakes $13/4 = 3\frac{1}{4}$ muffins
She sells the remainder at the farmers ' market = $3\frac{1}{4} - 3 = \frac{1}{4}$ of a muffin
She sells the remainder at the farmers ' market for \$2 per muffin , so she sells $\frac{1}{4} * \$2 = \0.50
worth of eggs at the farmers ' market per day
</think><answer> 0.5 </answer>
