

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

Total cost to Josh = 800 00 + 500 00 = 130 000 dollars

The value of the house increased by 150 %, so the new value = 800 00 + (800 00 * 150 / 100) = 200 000 dollars

Profit = new value - total cost = 200 000 - 130 000 = 700 00 dollars

</think><answer>

700 00 </answer>
