

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
Value of the house after repairs = \$80,000 + \$50,000 = \$130,000.
Increase in value = 150% of \$80,000 = 1.5 * \$80,000 = \$120,000.
So, the value of the house after repairs is \$120,000 + (initial value) = \$120,000 + \$80,000 = \$200,000.
Josh bought the house for \$80,000 and sold it for \$200,000.
Profit = Selling price - Cost price = \$200,000 - \$80,000 = \$120,000.
Therefore, Josh made a profit of \$120,000.
</think><answer>
\$120,000 </answer>
