

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>
the number of bolts of blue fiber needed is given as 2
the number of bolts of white fiber is given as half the number of bolts of blue fiber, so it is $2 / 2 = 1$
the total number of bolts is the sum of blue and white fibers, so it is $2 + 1 = 3$
</think>
<answer> 3 </answer>
