

Question:
Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
the initial value of the house is \$80,000
the repairs cost Josh \$50,000
the value of the house increased by 150% after the repairs
this means the value of the house after repairs is 150% of 80,000 + 80,000
so the value of the house after repairs is (150/100) * 80000 = 120000
the total cost to Josh is the initial cost of the house + the cost of repairs
so the total cost is 80000 + 50000 = 130000
the profit is the final value of the house - the total cost
profit = 120000 - 130000 = -10000
</think><answer>
10000
</answer>
