

Question:
Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
To find out how many eggs Janet sells at the farmers ' market , I need to calculate the total number of eggs she lays and then subtract the number of eggs she eats and bakes .

First , I will find the number of eggs she consumes and bakes . She eats 3 eggs per day for breakfast and bakes 4 eggs for muffins .

Total eggs consumed and baked per day = eggs eaten for breakfast + eggs baked for muffins
Total eggs consumed and baked per day = 3 + 4 = 7

Next , I will find the number of eggs she sells at the farmers ' market . I will subtract the total eggs consumed and baked from the total eggs laid .
Total eggs laid = 16
Total eggs sold = Total eggs laid - Total eggs consumed and baked
Total eggs sold = 16 - 7
Total eggs sold = 9

Now , I need to find the total amount of money she makes at the farmers ' market . I will multiply the total eggs sold by the price per egg .
Price per egg = 2 dollars
Total money made = Total eggs sold * Price per egg
Total money made = 9 * 2
Total money made = 18 dollars

</think><answer> 18 </answer>
