

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>

To find the total number of bolts needed for the robe, I first need to calculate the amount of white fiber required, which is half the amount of blue fiber.

Let's represent the number of bolts of blue fiber as B . The number of bolts of white fiber would then be $B/2$.

The total number of bolts is the sum of the bolts of blue fiber and the bolts of white fiber.

So, the total number of bolts = B (blue fiber) + $B/2$ (white fiber).

To simplify this, I can combine the terms: total number of bolts = $1.5 B$.

</think><answer> $1.5 B$ </answer>
