

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

To find the profit made by Josh , we need to calculate the increase in the value of the house . Initially , he bought the house for \$ 80 , 000 . Then , he put in \$ 50 , 000 in repairs , which increased the value of the house by 150 %.

To calculate the increase , we need to find 150 % of the original price .

150 % of 80 , 000 = (150 / 100) * 80 , 000 = 1 . 5 * 80 , 000 = 120 , 000 dollars .

So , the total value of the house after repairs is the sum of the original price and the repair cost , which is 80 , 000 + 50 , 000 = 130 , 000 dollars .

We know that the value increased by 150 % , which means the new value is 2 . 5 times the original value .

So , we can set up an equation :

New value = 2 . 5 * Original value

130 , 000 = 2 . 5 * 80 , 000

Now , we can solve for the original value :

2 . 5 * 80 , 000 = 130 , 000

80 , 000 * 2 . 5 = 130 , 000

Dividing both sides by 2 . 5 , we get :

80 , 000 = 52 , 000

Multiplying Giá£i 20 , 000 * 2 . 5 = 130 , 000
