

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>To begin with, the robe takes 2 bolts of blue fiber.

It's given that half as much white fiber as the blue fiber is needed, meaning it requires $2 / 2 = 1$ bolt of white fiber.

Adding the blue and white fiber together gives the total amount of bolts needed: 2 (blue) + 1 (white) = 3 bolts in total.</think>

<answer>3 bolts</answer>
