

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
total sprints a week is $3 * 3 = 9$
each sprint is 60 meters
so in total for the week he runs $9 * 60 = 540$ meters
</think>
<answer>
540</answer>
