

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think>

Consider 2 bolts of fiber for the robe . We know the fiber usage ratio of blue to white is 2 : 1 .

So the white fiber is $2 / 3 = 2 / (2 + 1)$ due to simplifying the ratio fractions .

Add up white and blue fiber : $2 + (2 / 3) = 2.67$

</think>

<answer>

2.67 </answer>

2
