

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

Total sprints = 3 sprints / time

Time = 3 times a week

Total distance per time = 60 meters per sprint * 3 sprints

Use multiplication to find total meters run each week:

Total per time * time = total distance run each week

</think>

<answer> 180 </answer>
