

Question:

A mental health volunteer is interviewing locals as part of a community outreach program. A 46-year-old man discloses that he has felt sad for as long as he can remember. He feels as though his life is cursed and if something terrible can happen to him, it usually will. He has difficulty making decisions and feels hopeless. He also feels that he has had worsening suicidal ideations, guilt from past problems, energy, and concentration over the past 2 weeks. He is otherwise getting enough sleep and able to hold a job. Which of the following statement best describes this patient's condition?

Answer Choices:

- A. The patient is at risk for double depression.
- B. The patient may have symptoms of mania or psychosis.
- C. The patient is likely to show anhedonia.
- D. The patient likely has paranoid personality disorder.

Reasoning + Answer:

<think> Based on the patient's symptoms , such as feelings of hopelessness , difficulty making decisions , worsening suicidal ideations , guilt , and loss of energy and concentration , these are classic symptoms of depression . The patient's inability to remember a time in their life when they weren't feeling sad also suggests a chronic depression . Double depression refers to major depressive disorder and dysthymia appearing one after the other , or one after the other , not simultaneously . Mania is only diagnosable in 4 consecutive symptoms eg hypomania such as excessively self-esteem or fabrications.
